Privacy Policy

We fully recognize and take into account the importance of the issue of personal data security, as well as electronic transactions and we have taken all the necessary measures, using the most modern and advanced methods, to ensure maximum security. All information relating to your personal information is secure and confidential.

In order to protect your personal data, we use Secure Sockets Layer (SSL) technology. SSL is the most trusted carrier for online transaction security worldwide. With this technology, every item you post on our site is encoded before it goes online and then the authenticity of the message and the server is investigated.

Finally, personal security is the Password you give when you join the Neorion Lab. In order to present any personal information you must first give us the User Name and the Password. For this reason, you must protect these elements well in so that they do not fall into the hands of third parties.

All transactions you make through www.musi-instruments.gr are governed by International and European Law, which regulates issues related to electronic commerce as well as by the Law on Consumer Protection (Law 2251/1994), which regulates issues related to distance sales.

The security of the Neorion Online Shop is achieved by the following methods:

Customer Recognition

The codes used to identify you are two: the Username and the Password, which each time you enter them give you access with absolute security to your personal

information. You have the ability to change your password as often as you like. The only person who has access to your information is you through the above codes and you are solely responsible for maintaining their secrecy towards third parties. Neorion does not disclose or distribute your personal data and any information you trust in us. The personal data that you make available to us as a member are used exclusively for the execution of your transactions and the facilitation of our communication or of the completion of the shipment of your orders. All information is encrypted and kept secure.

Automatic Disconnect

If there is no activity in our online store for 20 minutes, we automatically disconnect the user from the page.

Encryption

From the start-up to the end of your on-line session with the online store, all your information and personal data is encrypted based on the 128-bit SSL encryption protocol. Encryption is essentially a way of encoding the information until it reaches its intended recipient, which will be able to decode it using the appropriate key. Every time you connect to the online store, all communication between your computer and our e-shop systems is encrypted using a 128-bit key.

Username and Password

To enter the online store, you use two items, your Username and your Password. The online store allows you to change your password as often as you like, and we would recommend for your security to change your password at regular intervals and avoid using the same passwords through the profile editing system.
